

### User Story: Patient's Perspective

As a patient exhibiting unexplained neurological symptoms, I want to have the most accurate diagnosis possible because this is a life and death situation for me. I want my healthcare provider to have the most up-to-date technology to aid in the diagnosis process. I want the technology to be reliable and have the ability to see what the naked human eye may not be able to. I would like to have my diagnosis in a timely manner and have my provider present it to me with confidence prior to starting me on a treatment plan. I want to walk out of my doctor's office feeling confident that every possible step was taken in ensuring the accuracy of accepting or rejecting Multiple Sclerosis as the reason behind my symptoms.
